

2018-02-07 -- First meeting. - 2Hrs

Setup of GitHub.

2018-02-08 -- Setting up modules - 3.5hrs

Research about useable modules for api project.

Cabal installation of

To handle JSON FILES:

- Aeson

To handle API requests:

- HTTP-Simple

- network-api-support

- HTTP-Conduit

Update - The README.me file.

Update - The Main.hs with a working example of a api request.

(Maybe implement a constant for the api key, generates a new one every 24 hour, so the code can easily be edited.)

2018-02-09 -- 4.5 hrs

group meeting.

Research started.

2018-02-16 -- Setting up files and functions for the backend. - 5 hrs

Began coding a JSON farmer and a module which can create a json file from the farm.

2018-02-19 - 6 hrs

Working with the farmer/crawler

some errors occurred.

2018-02-20 - 6.5 hrs

Problem with all the IO actions in the crawler.

2018-02-21 - 7 hrs

Solved some of the IO problems.

Continue to work the the crawler.

2018-02-22 - 11 hrs

Discussion with the group.

Crawler work. Still some trouble getting all the IO actions to work correctly.

2018-02-23 - 6 hrs

The crawler starts to get its form. Working on some minor issues.

2018-02-25 - 14 hrs

Completed the crawler. Started to writing on the rapport.

2018-02-26 - 7 hrs

Completing the rapport with the group.

Completing the project as a whole.
